Flights Delays in the United States

- Flight Delays peaked in 2007 and have gradually dropped till 2015. From 2015 to 2016, there has been a sharp drop.
- Atlanta, Dallas-Fort Worth, Chicago, Newark are the busiest airports out of the top 20.
- Departure and carrier are the largest categories for delays

- Total Flight Delays and total flight minutes display a relatively **strong positive correlation**
- From the slope of the line, we can estimate that for every flight delayed, the time of delay increased by approximately **65 minutes**.
- The data points were more clustered below 8000 delays but spaced out as the number of flight delays increased.
